Self-Driving Labs

Student guide — reserving a hands-on lab session

The Self-Driving Labs portal is a no-login web page where you can browse upcoming hands-on lab sessions and grab a seat, or schedule a brand-new session of your own. This guide walks through both paths. Ask your instructor or program contact for the portal link if you don't already have it.

Two ways to get a seat

Join a Workshop	Sign up for a New Workshop
Add yourself to a session someone else already scheduled. Fastest option — the course, date, time, and time zone are already set.	Create a brand-new session for a course that isn't on the calendar yet, or at a time that works better for you. You choose the course, date/time, and time zone.

Before you start

- Your email address — used to confirm the reservation and add you to the session.
- If joining: nothing else to prepare — just find a session on the calendar.
- If scheduling a new session: know which course you want and roughly when you'd like it, plus your time zone.

The welcome page — choose “Join a Workshop” or “Sign up for a New Workshop”.

Option A — Join an Existing Workshop

- 1 From the welcome page, click **Join a Workshop**.
- 2 You'll see a calendar of upcoming sessions. Each colored tile is a scheduled workshop, showing its course code, start time, and seats remaining.
- 3 Click any day that has sessions to open the day's detail list.
- 4 In the list, click the workshop you want to join. Full sessions are grayed out and can't be selected.
- 5 On the join form, your course, reservation ID, start/end time, and time zone are already filled in and locked — just enter your email address and an optional comment.
- 6 Click **Join this workshop** →. You'll land on a confirmation page showing whether the reservation succeeded, along with the reservation details.

Day detail view — click a workshop to join it (full sessions are dimmed).

Option B — Sign Up for a New Workshop

- 1 From the welcome page, click **Sign up for a New Workshop**.
- 2 You'll see the same calendar, marked with a “+” on days you can schedule into. Click a day to preview what's already booked that day, then click **Continue to sign up** →.
- 3 On the form, choose your **course** from the dropdown.
- 4 Pick a **start date & time** using the date picker. The session's end time is set automatically (a fixed number of hours after the start — check the note under the field for the exact duration).
- 5 Choose your **time zone** from the dropdown — it defaults to the portal's standard zone, but you can pick your own.
- 6 Enter your **email address** and an optional note for the lab team, then click **Reserve this lab** →.
- 7 You'll land on a confirmation page showing whether the new session was created, along with the reservation details.

New-workshop calendar — click a day, then continue to the sign-up form.

Understanding course codes

Each session is labeled with a short course code such as **TE1-101.a** or **TE4-203.b**. The prefix (TE1, TE2, TE3...) groups related courses by curriculum family (for example, Campus Networking, Aruba Central, Data Center Networking). On the calendar page, open the **“Course code legend”** panel above the calendar to see the full list of codes and what each one stands for.

Time zones & session length

- When **joining**, the time shown is exactly as scheduled — the time zone field is locked so there's no mix-up.
- When creating a **new** session, pick the time zone that makes sense for you (or your students, if you're scheduling on their behalf). Double-check it before submitting — this is the most common source of confusion.
- New sessions run for a fixed number of hours after the start time you choose (shown on the form). You don't set an end time directly.

After you submit

Every submission — join or new — takes you straight to a result page that tells you immediately whether it worked, along with a summary of the course, reservation ID, start/end time, time zone, and the email used. If something goes wrong (for example the session filled up while you were on the form), the page explains that and lets you pick another session without starting over.

Tips & troubleshooting

A session shows “Full” — someone else took the last seat. Pick a different time slot, or use “Sign up for a New Workshop” to schedule another session of the same course.

Wrong time zone on a new session — double check the time-zone dropdown before submitting; it can't be changed afterward without contacting the lab team.

Didn't get a confirmation — check the reservation ID shown on the result page and hold onto it; reach out to your lab administrator with that ID if anything looks off.

Calendar looks empty — try a day further out; sessions are scheduled on a rolling basis a few weeks ahead.

Need help? Contact your instructor or lab administrator — include the reservation ID from your confirmation page if you have one.
